# Bug Bounty tip Automating SSRF

Renato Dante Dec 15, 2020 · 2 min read

First of all, I want to clarify that I am not fluent in English, so mistakes will happen during the reading :) If you have some question call me in [instagram](#)

Hey, what's up?

In this article i will share a little tip about how we can automate SSRF scan for bounties.

Ok Let's go.

In BurpSuite we have a a great extension called "Auto-Repeater". How does it's work?

Basically you can define some patterns (regex), that if found the auto-repeater will create a new request replacing for what you want.

I don't know if it's clear, let's explain with images.

In this window in Auto-Repeater we can set some regex to find urls. In this case i will use this regex.

```
https?:\V(www\.)?[-a-zA-Z0-9@:%._\+~#={1,256}\.[-a-zA-Z0-9()]{1,6}\b([-a-zA-Z0-9()@:%._\+~#?&//=]*)
```

Which: Replace First  
Comment:  
Regex Match: ☒  
Cancel OK

This regex only match if in url has “https”. You can do your regex to be better :)

In replace field you can put your domain or burp collaborator’s url. Like this

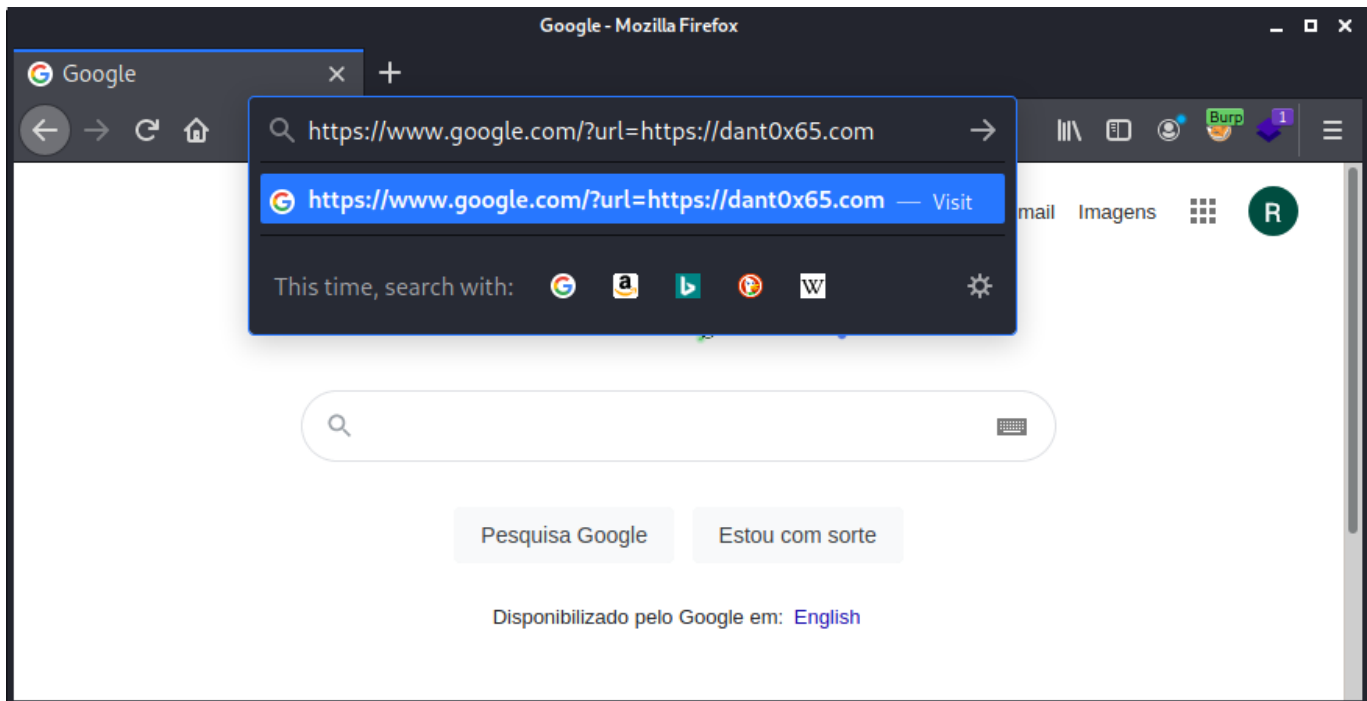

Add Global Replacement  
Type: Request Header  
Match: https?:\\V\\(www\\.)?[-a-zA-Z0-9@:~&./=]\*  
Replace: 6ovd420rocim065ofegfj|eu5lbcz1  
Which: Replace First  
Comment:  
Regex Match: ☒  
Cancel OK

In type field you can set what you prefer, in this case i will use “Request param value”

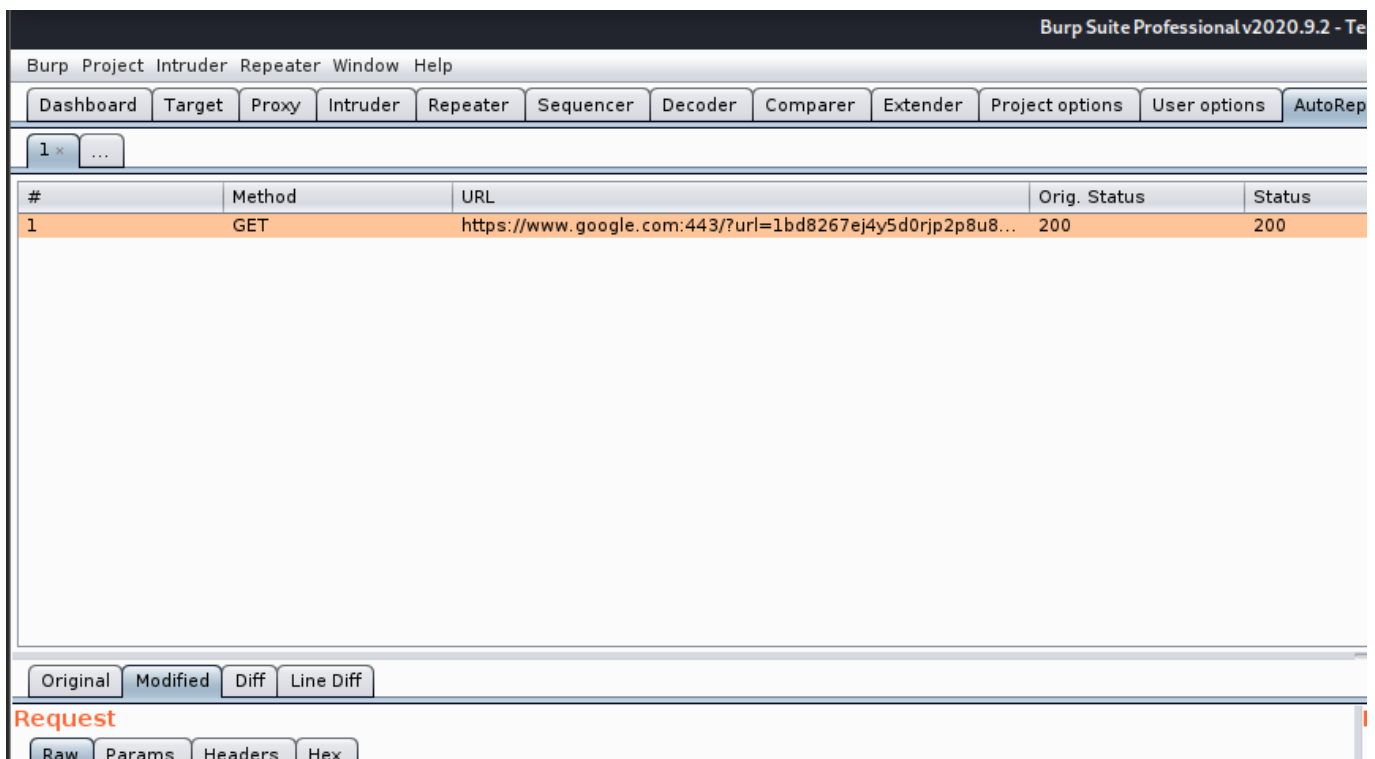

Edit Global Replacement  
Type: Request Param Value  
Match: [-a-zA-Z0-9()@:% \\+\\.~#?&//=]\*  
Replace: j8gxbohe53.burpcollaborator.net  
Which: Replace First  
Comment:  
Regex Match: ☒  
Cancel OK

[Get started](#)[Open in app](#)

When i'm do a GET request with url in parameter value the Auto-repeater will create a new requests replacing the url param value

Here is the url changed automatically.

[Get started](#)[Open in app](#)

```
3 User-Agent: Mozilla/5.0 (X11; Linux x86_64; rv:78.0) Gecko/20100101 Firefox/78.0
4 Accept: text/html,application/xhtml+xml,application/xml;q=0.9,image/webp,*/*;q=0.8
5 Accept-Language: en-US,en;q=0.5
6 Accept-Encoding: gzip, deflate
7 Connection: close
8 Cookie: MTR_
```

## Conclusion

You can put this setting and navigate through the site, during navigation monitor all the requests that your domain has received
